The Eisenhower Matrix

	URGENT	Not Urgent
Important	Do - (Your MVP) ● Allow users to enter a perfume name through the terminal. ● Search for perfumes based on the user's input. ● Display up to five matching perfume search results and allow users to select the fragrance they are looking for. ● Retrieve and display the selected perfume's fragrance information, including top, heart, and base notes when available. ● Handle invalid input, unavailable perfumes, empty search results, missing fragrance notes, and API errors with clear messages.	Schedule - (For V2.0+) ● Allow users to search for perfumes by brand as well as by perfume name. ● Add the ability to compare the fragrance notes of two or more perfumes. ● Display additional perfume information, such as fragrance family and other available details. ● Allow users to save their favorite perfumes for later. ● Keep a history of recently searched. ● Add a GUI.
Not Important	Delegate - (Use a library) ● **Scento API:** Retrieve perfume search results and fragrance information instead of creating and maintaining our own perfume database. ● **Java HttpClient:** Send HTTP requests to the Scento API instead of writing our own HTTP communication system. ● **Gson library:** Parse JSON responses from the Scento API instead of building our own JSON parser.	Delete - (Cut it) ● Add online shopping functionality or allow users to purchase perfumes directly through the application. ● Integrate payment processing, checkout, or billing systems. ● Create user registration, login, and account management functionality. ● Build a mobile application for Android or iOS as part of this project. ● Add cloud synchronization across multiple devices. ● Create a perfume retailer marketplace that allows different sellers to list and

	• **Java Scanner:** Read user input from the terminal instead of creating a custom input-reading system. • **Terminal tools (`curl` and `jq`):** Test API requests and inspect JSON responses during development. • **IntelliJ IDEA:** Use an existing development environment to write, organize, run, and debug the Java application.	sell products.
